

LED BULB FACTS

LIGHTING UPGRADE PROGRAM

LEDs save energy by using **55-65% less energy** than older technology.

LEDs help protect the environment! LEDs require less energy which results in **lower carbon emissions**.

LEDs are more reliable and **last 3 to 4 times longer** than older lighting alternatives.

LEDs create **higher quality color** appearance of an object

LEDs **improve face recognition** by producing even light on the ground.

LEDs **produce a warm white light** similar to moonlight

LEDs **produce light efficiently**. Unlike other types of bulbs which emit light and heat in all directions, LEDs emit light in a specific direction.

LEDs lights **don't contain toxic chemicals** like mercury.

LEDs **improve nighttime visibility** because they produce more light per watt than traditional lights.
